PROFILE

Computer Science student at Abbottabad University of Science and Technology (6th semester, 3.76 GPA), exploring Artificial Intelligence, technology and meaningful digital solutions.

EDUCATION

BS Computer Science

Abbottabad University of Science and Technology (AUST) | 2024 – Present

Currently in the 6th semester with a 3.76 GPA, focusing coursework and self-study around Artificial Intelligence and backend development.

Intermediate (Computer Science)

Girls Degree College, Havelian | 2023

Completed with 572 / 1100 marks.

Matric (Science)

New Century Secondary Public School, Havelian | 2021

Completed with 630 / 1100 marks.

EXPERIENCE

AI & Python Internship

SIBRS Technology | SJARVIS EDU · Phase 6

- Trained in Python and OOP, then contributed Phase 6 (Classroom Management) of SJARVIS EDU — an independent FastAPI backend with SQLAlchemy and SQLite, checked by an automated test suite.
- Introduced to Git, GitHub and n8n workflow automation, and delivered several technical presentations.

PROJECTS

SJARVIS EDU — Phase 6: Classroom Management

Internship project · SIBRS Technology | Tech: Python, FastAPI, SQLAlchemy, SQLite, pytest · 69 endpoints, 13 routers, 16 tables, 118 automated tests

- A classroom-management backend for a multi-phase educational platform — classes, enrollment, schedules, attendance, materials, assignments and announcements. Built as an independent FastAPI service on SQLAlchemy ORM and SQLite, verified with an automated test suite.

City Route Finder Using Graph Traversal

Course project | Tech: Graph Traversal, Algorithms

- A route-finding application that applies graph traversal algorithms to determine efficient paths between locations — a project that strengthened my algorithmic thinking and problem-solving skills.

Access Control List (ACL) Implementation

Computer Networks project | Tech: Networking, ACL, Security Basics

- Implemented an ACL configuration as part of a Computer Networks project to understand traffic filtering, network security concepts and access management.

OS Command Toolkit

Operating Systems lab project | Tech: C++, System Calls, Console App

- A menu-driven C++ console program that performs file and folder operations — create, copy, move, delete, list and navigate — showing how programs rely on operating-system system calls behind the scenes.

SKILLS

AI & Automation: Artificial Intelligence, AI Chatbots, AI Agents, Automation

Programming & Tools: Python, FastAPI, SQLAlchemy, SQLite, n8n Workflow Automation, Git & GitHub, SQL (basic), VS Code

Design & Productivity: MS Office, Canva, Figma (basic)

Soft skills: Effective Communication, Problem Solving, Critical Thinking, Teamwork, Leadership, Time Management, Quick Learner

Languages: Urdu (native), Hindko (native), English
